

SKILLS ASSESSMENTS

Get a quick snapshot of what an individual knows about a particular area

Now you can evaluate prospective and current employees quickly, effectively and consistently with MeasureUp's assessment tools. Our 30-question assessments can be taken online with results emailed directly to you for easy deployment and scoring. You'll gain confidence in hiring, promotion and class placement decisions, while maintaining consistency among interview questions and performance reports.

Reset

You manage a SharePoint Server 2013 farm. There are two web applications: WebApp1 and WebApp2. The My Sites host site collection is located in WebApp1. WebApp1 is connected to the User Profile Service application proxy. Both WebApp1 and WebApp2 are connected to the Managed Metadata Service and the Search service.

You implement a site collection based on the Team Sites template in WebApp2.

You need to ensure that users can create newsfeeds on a team site.

What should you do?

Choose the correct answer

- Add the User Profile service application proxy to the service application proxy group connected to WebApp2.
- Create a second instance of the User Profile Service application in WebApp2.
- Use the AppFabric Configuration Tools to configure a persistence store.
- Run Remove-SPDistributedCacheServiceInstance on all front-end servers.
